

I think you may have a problem with LibreOffice recognizing the data as text rather than numeric or a date. I give an example:

1. Using the latest Manager app and the latest LibreOffice.
2. Display the data needed in Manager. I displayed some income transactions.
3. Copy to clipboard.
4. Paste into LibreOffice Calc.
5. I select a date in the pasted data (below).

	A	B	C
1	Date	#	Paid by
2	18/08/2021		Medibank Refunds

6. Look at the date as displayed in the cell and in the input line. Notice that they are the same.
7. Now I changed the cell format to 'date' (actual format irrelevant).

	A	B	C
1	Date	#	Paid by
2	18/08/2021		Medibank Refunds

8. Notice how the date in the input line is now preceded by a "" (Quote). This indicates 'text'.
9. Changing the date format will have no effect on the displayed date.
10. You can either edit each entry and remove the "", or do the following using find and replace:
 - a. Highlight the cells (not really necessary!)
 - b. Open "Find and Replace".
 - c. Make sure "Regular Expression" is selected. If you only want the selection processed, also select ""Current Selection only".
 - d. In the "Find" line enter "." (Yes, DOT ASTERISK without the quotes). This will select all the text you see in the cell, and not the quote.
 - e. In the "Replace" line enter "&" (AMPERSAND without the quotes). This will paste all the selected text.
 - f. Click "Replace All".
 - g. Problem solved. This worked for currency and numbers too; though with my latest versions, the numbers no longer have the problem.
